“The Legend of Zelda: Breath of the Wild” meets “Stardew Valley”

Fantasy Survival

First Person POV

Computer/PC

01 CORE MECHANICS & Pillars

[Resource Gathering]

- Players can interact with their environment by obtaining different resources.

[Inventory System]

- Players can keep track of the resources they’ve gathered in their inventory.

[Health Mechanics]

- Players must safeguard their health and avoid taking damage to survive.

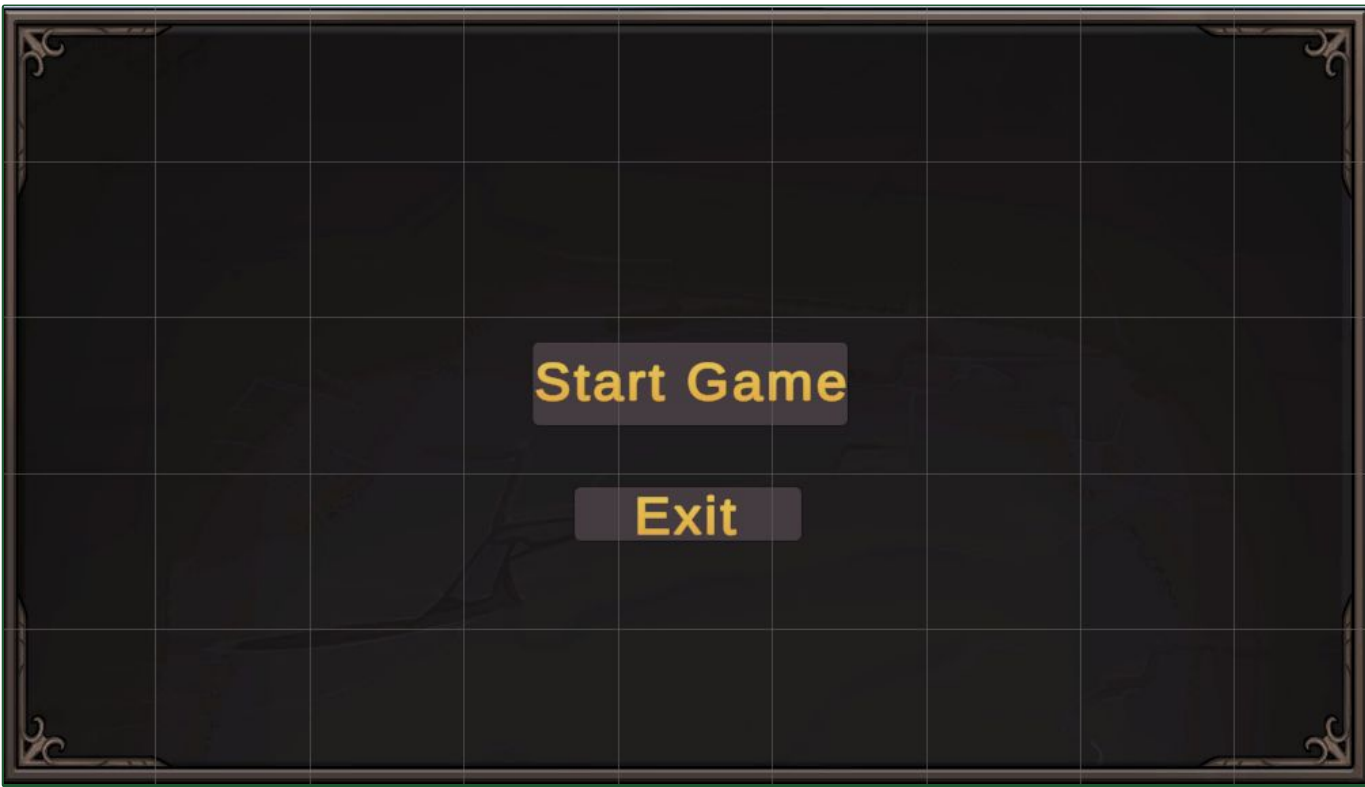

[Minimap Navigation]

- Players can navigate the open-world environment with the help of the minimap in their HUD.

DESIGN PILLARS

- Survival focused – players must survive in a magical environment
- Narrative-driven – players can play an immersive storyline
- Action-packed – players must dodge and survive attacks by enemies

05 INNOVATIONS / CHALLENGES

This survival game does not solely emphasize surviving. Players are encouraged to gather resources and explore this fantasy world as they seek to discover the rare materials in the environment. They can also interact and battle NPCs in one of the side quests/storylines. We implemented this in such a way where players can collect resources and fight enemies found throughout the world.
